SIGNET 2551 MAGMETER NEW!

The Signet 2551 Magmeter is an insertion style magnetic flow sensor without any moving parts. All versions are constructed of corrosion-resistant materials to provide long-term reliability with minimal maintenance costs. Utilizing the comprehensive line of Signet installation fittings, sensor alignment and insertion depth is automatic.

These versatile, simple-to-install sensors deliver repeatable flow measurement over a wide dynamic range in pipe sizes ranging from 0.5 to 8 inches (contact us for larger pipe sizes). Signet 2551 Magmeters offer three output options for use with Signet flow instrumentation using a frequency or digital (S³L) sensor output. The 4 to 20mA output can be used for a direct input to PLCs, chart recorders, etc. The 2551 Magmeter with built-in display can be used for permanent and resettable total. And what's more, the display contains multi-languages with English, Spanish, German, French, Italian and Portuguese menu options.

SIGNET ANALOG FLOW METER

Model MK509 requires no external power source or battery. Quick installation on instrument panel, pipe or wall. Combine with the **MK515** flow sensor and installation fitting and you've got a completely self-contained, affordable flow monitoring system. Meter can be mounted up to 200 ft. away from sensor and is accurate within ±2% of full scale.
